

What is claimed is:

1. A toy glider comprising:

a shaft;

5 a roller attached to a first end of the shaft; and

a housing attached to a second opposing end of the shaft.

2. The toy glider of claim 1, further comprising a front end coupled to the housing.

10 3. The toy glider of claim 1, further comprising a sound pad coupled to the housing.

4. The toy glider of claim 1, further comprising a light pad coupled to the housing.

5. The toy glider of claim 1, wherein the roller comprises at least one wheel and an axle.

15

6. The toy glider of claim 1, further comprising at least one decorative member coupled to the housing.

7. The toy glider of claim 1, further comprising at least one decorative member coupled to the

20 roller.

8. The toy glider of claim 1, further comprising at least one handle coupled to the housing.

9. The toy glider of claim 6, wherein the at least one decorative member coupled to the

25 housing comprises a front end made to resemble the front end of a jet.

10. The toy glider of claim 6, wherein the at least one decorative member coupled to the housing comprises a front end made to resemble the front end of an automobile.

11. The toy glider of claim 6, wherein the at least one decorative member coupled to the
5 housing comprises at least one wing.

12. The toy glider of claim 6, wherein the at least one decorative member coupled to the roller comprises at least one wing.

10 13. The toy glider of claim 1, wherein the housing includes at least one handle for grasping the toy glider.

14. A method for manufacturing a toy glider comprising the steps of:

providing a shaft;

15 coupling at least one roller to a first end of the shaft; and,

coupling at least one housing to a second opposing end of the shaft.

15. The method of claim 14, comprising the further step of:

coupling a decorative front end to the housing.
